

OUTLINES OF OBSTETRICS.

A SYLLABUS OF LECTURES

DELIVERED AT LONG ISLAND COLLEGE HOSPITAL

BY

CHARLES JEWETT, A. M., M. D.,

Professor of Obstetrics and Pediatrics in the College, and Obstetrician
to the Hospital.

EDITED BY

HAROLD F. JEWETT, M. D.

This book treats only of the general facts and principles of obstetrics; these are stated in concise terms and in a systematic and natural order of sequence, theoretical discussion being as far as possible avoided; the subject is thus presented in a form to be most easily grasped and remembered by the student. Special attention has been devoted to practical questions of diagnosis and treatment, and in general particular prominence given to facts which the student most needs to know. The condensed form of statement and the orderly arrangement of topics adapt it to the wants of the busy practitioner as a means of refreshing his knowledge of the subject and a handy manual for daily reference.

For many years there has been a demand from members of the medical and legal professions for a medium-sized work on this most important branch of medicine. The necessarily prescribed limits of the work permit only the consideration of those parts of this extensive subject which the experience of the author as coroner's physician of the city of Philadelphia for a period of six years leads him to regard as the most material for practical purposes.

Particular attention is drawn to the illustrations, many being produced in colors, thus conveying to the layman a far clearer idea of the more intricate cases.
